Lab Usage Guidelines

General Guidelines

- **Lab Cleanup:** All lab resources will be cleaned up at **6 PM** every day. Ensure that any necessary data is saved before this time.
- **Restricted Access:** Labs have restricted access to the required SKUs for training purposes only. Unauthorized access or modification of SKUs is not permitted.
- **Monitoring & Compliance:** Lab activities are monitored for security and compliance. Any misuse of resources may result in restricted access.

Do's

- Delete unnecessary resources that are no longer in use to optimize resource availability.
- If an "out of quota" error occurs, switch to another region and attempt the operation again.
- In case of any issues, send an email to **hemant.sharma@intellipaat.com** with a screenshot of the error for support.
- Follow the provided training guidelines and recommended configurations to ensure the smooth operation of lab exercises.
- Regularly check for lab notifications and updates to stay informed about maintenance or policy changes.
- Ensure that all deployments and services are properly shut down after use to prevent unnecessary resource consumption.
- Refer to official documentation and provide training materials for troubleshooting issues before escalating them.

Don'ts

- Do not share your credentials with anyone under any circumstances.
- Do not install or run unauthorized software within the lab environment.
- Do not modify network settings or attempt to access restricted SKUs beyond the provided permissions.
- Do not perform stress testing, penetration testing, or any unauthorized security tests that could impact lab stability.
- Do not store personal, sensitive, or production-related data in the lab environment.
- Do not attempt to extend lab access beyond the assigned timeframe or bypass any restrictions.

This document ensures clarity and establishes professional guidelines for lab usage. Let me know if any further refinements are needed.
